NARRATIVE REPORT
Method 1625M Semivolatiles

Curtis & Tompkins
2323 Fifth Street
Berkeley, CA 94710

08/30/06

Attn: Steve Stanley

PA Reference: 2711

Samples: DW081706B, NKGW01, NKGW02, NKGW05

Semivolatiles analysis:

The samples were extracted and analyzed by Method 1625C, modified for the lowest possible detection limits. A 10 gram aliquot was spiked with 0.1 ug of N-Nitrosodimethylamine-d6 and extracted by sonication. The sample extract was concentrated to a final volume of 1.0 mL and spiked with 0.1 ug of 2,2'-Difluorobiphenyl as an internal recovery standard. The extracts were analyzed by GC/MS with the mass spectrometer operating in the "Specific Ion Mode" for greater sensitivity and lower detection limits. The instrument was calibrated with five initial calibration standards ranging from 0.02 ug/mL to 1.00 ug/mL.

On-going Precision and Recovery

A laboratory blank (P&R) was spiked with 0.02 ug of NNDMA and 0.1 ug of its labeled analog, and extracted and analyzed like a sample for each extraction batch. Recoveries for NNDMA and its Label are within the method specified recovery limits for the P&R's associated with the samples.

Laboratory Blank

A laboratory blank was extracted and analyzed like the sample with each extraction batch. Laboratory blank 11714 contains NNDMA at a concentration of 0.0006 ug/L. The other laboratory blank associated with the samples has no NNDMA detected.

Samples

Sample DW081706A has NNDMA detected at a concentration of 0.0121 ug/L.

NARRATIVE REPORT
Method 1625M Semivolatiles

Curtis & Tompkins

Berkeley, CA 94710

08/30/06

Attn: Steve Stanley

PA Reference: 2710

Samples: DW082106B

Semivolatiles analysis:

The samples were extracted and analyzed by Method 1625C, modified for the lowest possible detection limits. A 10 gram aliquot was spiked with 0.1 ug of N-Nitrosodimethylamine-d6 and extracted by sonication. The sample extract was concentrated to a final volume of 1.0 mL and spiked with 0.1 ug of 2,2'-Difluorobiphenyl as an internal recovery standard. The extracts were analyzed by GC/MS with the mass spectrometer operating in the "Specific Ion Mode" for greater sensitivity and lower detection limits. The instrument was calibrated with five initial calibration standards ranging from 0.02 ug/mL to 1.00 ug/mL.

On-going Precision and Recovery

A laboratory blank (P&R) was spiked with 0.02 ug of NNDMA and 0.1 ug of its labeled analog, and extracted and analyzed like a sample for each extraction batch. Recoveries for NNDMA and its Label are within the method specified recovery limits for the P&R's associated with the samples.

Laboratory Blank

A laboratory blank was extracted and analyzed like the sample with each extraction batch. Laboratory blank 11714 contains NNDMA at a concentration of 0.0006 ug/L. The other laboratory blank associated with the samples has no NNDMA detected.

Samples

The sample has NNDMA detected at a concentration of 0.0417 ug/L.

High responses were observed for delta-BHC and methoxychlor in the ICV analyzed 12/13/06 18:06; average ICV drift met method requirements, and these analytes were not detected at or above the RL in the associated sample. Low response was observed for 4,4'-DDT in the CCV analyzed 12/15/06 04:40; average CCV drift met method requirements. No other analytical problems were encountered.

Polychlorinated Biphenyls (PCBs) (EPA 8082):

No analytical problems were encountered.

Polynuclear Aromatics by HPLC (EPA 8310):

Low recoveries were observed for benzo(a)pyrene in the MS/MSD of 514AGW101 (lab # 191314-019); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A):

High responses were observed for aluminum, magnesium, and sodium in the CCV analyzed 12/13/06 22:04 and the CCV analyzed 12/13/06 23:39; these analytes were not detected at or above the RL in the associated sample. Low recoveries were observed for calcium and manganese in the MS of LF10SP01 (lab # 191314-003); the associated RPDs were within limits. Responses exceeding the instrument's linear range were observed for sodium in the MS/MSD of LF10SP01 (lab # 191314-003). High % difference was observed for sodium in the serial dilution of LF10SP01 (lab # 191314-003); this analyte was not detected at or above the RL in the associated sample.
